

*The Photovoltaic (Solar) System, pictured below, is a 10 kW system which has generated 6,687 kilowatt-hours in approximately six months. The system has 48 individual 208 watt solar panels connected together. This project gives Talquin an opportunity to research the benefits of solar power to its Members and is located at Talquin's Operations Center on Thomasville Road. **Keith Johnson, Talquin Lineman**, pictured below, inspects the solar grid.*
